Interview Questions Answers

Q: Why is whitespace a data-quality issue?

Answer:

Extra whitespace (leading, trailing, or multiple middle spaces) causes data quality issues because databases and spreadsheet tools treat "Ali " and "Ali" as two different values. This leads to failed lookup functions (like VLOOKUP/XLOOKUP), duplicate counts, and inaccurate aggregation or filtering results.

Q: What does TRIM do?

Answer:

The **TRIM()** function removes all leading and trailing spaces from a text string and reduces multiple spaces between words to a single space.
